Summary

BSc (Computer Science & Information and Technology Management) with hands-on experience in LLMs, AI models, ASP.NET Core, Docker, AWS, Microsoft Azure, and distributed systems. Lead developer for Tonkin & Taylor for a document reviewer project using AI-driven analysis. Principal developer at dividni.online Docker containerization, developing OMR processing, and composing and grading individualized assessments.

Skills

Languages & Scripting: C#, Java, JavaScript, HTML, SVG, Python, SQL, C, Bash, PowerShell

Databases: SQL Server, MongoDB

Frameworks & Tools: Git, ASP.NET Core, Docker, AWS, REST API Development, IIS Web Server, Nginx

Education

The University of Auckland ***2023 - 2025***

BSc in Computer Science & Information and Technology Management

Work Experience

PB Tech

Service Technician ***Mar 2026- Present***

- Handle customer after-sales requests.
- Repair various electronic products

The University of Auckland

Research Assistant ***Jan 2026 – Present***

- Designed and implemented the backend architecture and security framework for Dividni (individualized assessment system).

Teaching Assistant ***Jul 2025 – Nov 2025***

- Tutor and Marker for COMPSCI 335 - Web Programming and Distributed Services

Domino's Pizza

Delivery Driver ***Jun 2022 - Jan 2023***

- Pizza delivery and in-store cashier

dividni.online

Principal Developer ***Nov 2024 - Present***

- Developed Docker containerization, security hardening, and OMR processing

Tonkin & Taylor

Software Developer ***Mar 2025 – Jul 2025***

- Developed an AI-powered automated pre-review tool for engineering reports.

Projects

Individualized Assessments (dividni.online)

- Built an easy-to-use online generator for optical mark recognition (OMR) sheets in SVG, supporting multiple languages and customizable for individualized multiple-choice assessments. Deployed on Ubuntu Server.
- Actively used across at least 10 courses at the University of Auckland; described by the university's Director of Teaching and Learning Gayle Morris as "fills a critical gap for us" after the retirement of the university's commercially bought legacy OMR scanning system.

Faultless Document Reviewer for Tonkin & Taylor

- Built a lightweight CLI that pre-reviews engineering Word documents against configurable rules; integrated Google Gemini for AI-driven analysis.
- Implemented a rule engine (JSON rules) with categories/weights and confidence thresholds, plus multi-stage filtering (redundancy & trivial-issue suppression) to reduce comment overload.
- Provided an optional Word Add-in UI that shares the same analysis engine as the CLI.

Awards

IEEE Education Society – TALE 2026 Student Travel Award

Community Engagement

Museum of Transport and Technology (MOTAT), Auckland **2025**

STEM Fair Volunteer

The University of Auckland **2025**

University Open Day Volunteer; Volunteer at the Bob Doran Museum of Computing
